

CLAIMS

1. (amended) A graft copolymer wherein a branch polymer
having a fluoroalkyl group is bonded to a trunk polymer
5 through a linkage having a $-C(=O)NH-$ group,
wherein the linkage having a $-C(=O)NH-$ group is formed by
reacting an active hydrogen group of a chain transfer agent
constituting the branch polymer with an isocyanate group
contained in a monomer constituting the trunk polymer.

10

2. (deleted)

3. (amended) A solvent-based water- and oil-repellent
composition comprising the graft copolymer of claim 1.

15

4. A process for preparing the graft copolymer of claim 1,
which comprises copolymerizing a macromonomer, which is
obtained by reacting an isocyanate group-containing vinyl
monomer with a branch polymer, and a copolymerizable
20 monomer to form a trunk polymer.

5. A process for preparing the graft copolymer of claim 1,
which comprises reacting a trunk polymer, which is obtained
by copolymerizing an isocyanate group-containing vinyl
25 monomer and a copolymerizable monomer, with a branch
